KNOWLEDGE SHARING

Vito Piraccini
Eltimate Visconti

The world of dam technology is being through a fast evolution period, only thanks to the 20-30 years experience projects. The most important of the technological conditions are being built, that we could not have through collection. This is their opportunity for the most important activities done in the engineering field. The rate of development is constant, but it is not the only factor that is driving the knowledge. The knowledge is shared through ICOLD for experience on the subject of water construction, partly supported by you in building the specific activities. These conditions are an example of what should be done in a more systematic way.

I am sure we will be able to expand the sharing of this new knowledge in the construction technology. In case ICOLD is your organization, you will be able to give your contribution to the development of the knowledge of the dam construction. This is a subject that is very important for the dam construction. The knowledge of the dam construction is not only a technical subject, but it is also a social subject. The dam construction is a social subject, because it is a subject that is very important for the dam construction. The dam construction is a social subject, because it is a subject that is very important for the dam construction. The dam construction is a social subject, because it is a subject that is very important for the dam construction.

In this process, I am sure because of the specificity of our situation, but also because the knowledge sharing process is that there are not so good as it is, it is more much more important to be engaged in the knowledge about a new technology, to bring it to the world, to make it available to the world. The dam construction is a social subject, because it is a subject that is very important for the dam construction. The dam construction is a social subject, because it is a subject that is very important for the dam construction. The dam construction is a social subject, because it is a subject that is very important for the dam construction.
