### AFRICA'S WATER DEVELOPMENT NEEDS

**Vice President  
Paul Bousquet**

It was a privilege to attend a recent workshop in Johannesburg, South Africa on Sustainable Water Resources which had been organized by the New Partnership for Africa's Development (NEPAD) and the African Development Bank (ADB). It was able to attend in view of the important general international involvement in the water in the South African Department of Water Affairs and Forestry and of my background in international cooperation in the field of water resources and development. The workshop was organized by the African Development Bank (ADB) and the African Development Bank (ADB) in partnership with the African Development Bank (ADB) and the African Development Bank (ADB).

The workshop was a very good opportunity to discuss the water resources and development needs of Africa which are still a major challenge for the continent. The workshop was a very good opportunity to discuss the water resources and development needs of Africa which are still a major challenge for the continent.

Some of the interesting facts on African water resources are as follows:

- Africa has the largest water resources in the world, but the water is not evenly distributed.
- The continent is characterized by a high variability of water resources, both in terms of quantity and quality.
- The continent is characterized by a high variability of water resources, both in terms of quantity and quality.

In spite of the abundant water resources, the continent still faces the development of the water sector. The continent still faces the development of the water sector.

Africa's water resources are still a major challenge for the continent. The continent still faces the development of the water sector.

The continent is characterized by a high variability of water resources, both in terms of quantity and quality.

The continent is characterized by a high variability of water resources, both in terms of quantity and quality.
